

Press release

## **NEW DATE FOR CONFERENZAGNL, HYDROGEN ENERGY SUMMIT & EXPO AND DRONITALY: IN BOLOGNA FROM 23 TO 25 JUNE 2021**

Milan, 11 December 2020 - The 2021 edition of Mirumir and In Fieri initiatives will take place at **BolognaFiere** from 23 to 25 June 2021, differently from what was initially planned. Due to the agreement of partnership signed by Mirumir, In Fieri and BolognaFiere last May, the events will take place simultaneously with ACCADUEO, for more than 30 years the reference event for water service in Italy, and CH4, a thematic exhibition dedicated to technologies and systems for the transport and distribution of gas.

The continuation of the pandemic and the succession of government provisions, aimed at its containment, are at the basis of BolognaFiere's decision to postpone the date of the physical event (initially scheduled in May) to **23/24/25 June 2021** with the aim of creating the best conditions for the planning and holding of the event, especially for international visitors and operators.

The synergy between ACCADUEO / CH4 (pavilions 25 and 26) and the initiatives ConferenzaGNL, HESE (**pavilions 31 and 32**) and Dronitaly (**Service Center area**) will create exhibition paths focused on sustainability that for three days will be a meeting place for technology companies, utilities, Public Administration and national and international buyers.

The first edition of [HESE - Hydrogen Energy Summit&Expo](#), an initiative focused on the sector of logistics and end uses of hydrogen, is an unmissable opportunity to develop business relationships with operators in the mobility, industry and residential sectors destined in the near future to become major users of this energy source.

The sixth [International Conference & Expo of ConferenzaGNL](#), an initiative created in 2012 to promote the direct uses of liquefied natural gas in the Euro-Mediterranean area looks at the use of LNG for maritime transport, heavy land transport, industries and isolated networks, in support of the energy transition.

Both initiatives will offer three days of debates, conferences and workshops during which European and national institutions, associations, companies and experts, representatives of industry and science will discuss the world market scenarios, economic and financial aspects and the development of research and technologies.

The new edition of [Dronitaly](#), an event aimed at the Italian community of the drone sector, will develop, however, the comparison on the most topical and urgent issues related to technologies that find an increasingly incisive application in the management of networks and environmental protection. Companies of the sector will have the extraordinary opportunity to occupy a central area and a junction to four cross-sectional projects of extreme interest, thus promoting the meeting between operators of the sector and representatives of the Utility & Energy market.

Finally, special exhibition areas will be dedicated to the promotion of solutions and technologies favoring moments of business to provide the key to understanding the latest trends in the industry.
